Random Number Generation and Monte Carlo Methods (Statistics and Computing)

James E. Gentle

Random Number Generation and Monte Carlo Methods (Statistics and Computing) James E. Gentle

Monte Carlo simulation has become one of the most important tools in all fields of science. Simulation methodology relies on a good source of numbers that appear to be random. These "pseudorandom" numbers must pass statistical tests just as random samples would. Methods for producing pseudorandom numbers and transforming those numbers to simulate samples from various distributions are among the most important topics in statistical computing.

This book surveys techniques of random number generation and the use of random numbers in Monte Carlo simulation. The book covers basic principles, as well as newer methods such as parallel random number generation, nonlinear congruential generators, quasi Monte Carlo methods, and Markov chain Monte Carlo. The best methods for generating random variates from the standard distributions are presented, but also general techniques useful in more complicated models and in novel settings are described. The emphasis throughout the book is on practical methods that work well in current computing environments.

The book includes exercises and can be used as a text or supplementary text for various courses in modern statistics. It could serve as the primary text for a specialized course in statistical computing, or as a supplementary text for a course in computational statistics and other areas of modern statistics that rely on simulation. The book, which covers recent developments in the field, could also serve as a useful reference for practitioners. Although some familiarity with probability and statistics is assumed, the book is accessible to a broad audience.

The second edition is approximately 50% longer than the first edition. It includes advances in methods for parallel random number generation, universal methods for generation of nonuniform variates, perfect sampling, and software for random number generation.

From reader reviews:

Bonnie Boyd:

What do you consider book? It is just for students as they are still students or it for all people in the world, exactly what the best subject for that? Just you can be answered for that issue above. Every person has several personality and hobby for each and every other. Don't to be obligated someone or something that they don't need do that. You must know how great in addition to important the book Random Number Generation and Monte Carlo Methods (Statistics and Computing). All type of book could you see on many methods. You can look for the internet solutions or other social media.

Jeanne Crank:

Book is to be different for every single grade. Book for children until eventually adult are different content. To be sure that book is very important usually. The book Random Number Generation and Monte Carlo Methods (Statistics and Computing) had been making you to know about other information and of course you can take more information. It is rather advantages for you. The reserve Random Number Generation and Monte Carlo Methods (Statistics and Computing) is not only giving you more new information but also to be your friend when you really feel bored. You can spend your spend time to read your e-book. Try to make relationship while using book Random Number Generation and Monte Carlo Methods (Statistics and Computing). You never truly feel lose out for everything if you read some books.

Arthur Ramires:

This Random Number Generation and Monte Carlo Methods (Statistics and Computing) are generally reliable for you who want to certainly be a successful person, why. The explanation of this Random Number Generation and Monte Carlo Methods (Statistics and Computing) can be among the great books you must have is actually giving you more than just simple looking at food but feed anyone with information that might be will shock your preceding knowledge. This book will be handy, you can bring it almost everywhere and whenever your conditions both in e-book and printed versions. Beside that this Random Number Generation and Monte Carlo Methods (Statistics and Computing) giving you an enormous of experience for example rich vocabulary, giving you trial run of critical thinking that we realize it useful in your day action. So , let's have it and revel in reading.

Mary Kerr:

Playing with family in a park, coming to see the coastal world or hanging out with buddies is thing that usually you will have done when you have spare time, subsequently why you don't try thing that really opposite from that. A single activity that make you not sense tired but still relaxing, trilling like on roller coaster you have been ride on and with addition info. Even you love Random Number Generation and Monte Carlo Methods (Statistics and Computing), it is possible to enjoy both. It is excellent combination right, you still wish to miss it? What kind of hang-out type is it? Oh can occur its mind hangout men. What? Still don't

understand it, oh come on its identified as reading friends.
